

PROPORTIONAL IN-LINE DOSING UNIT

Process

PRODOX unit is manufactured to guarantee an accurate proportional dosage in a process line. A flow-meter measures the instantaneous flow rate and a digital metering pump doses the right quantity of additive. Compact dimension, low weight and easy assembly into the process line (thanks to the height adjustment) make the unit a helpful and convenient tool.

The system can be also used as instantaneous flow-meter with a total processed volume counter.

Applications

Dosing unit suitable for:

- Clarifying agents
- Arabic gum
- Enzymes
- Flavours
- Coloring substances
